# Evaluating Connected and Automated Driving Scenarios in Real-World Settings

Determining the effect connected and automated vehicles (CAV) could have on our roadways would require testing the vehicles themselves in a real-world environment. Effective April 2, 2018, the California Department of Motor Vehicles (DMV) began approving applications for autonomous vehicle testing **without a driver** and deployment (public use). At our final meeting of 2018, we have invited experts to discuss their recent or proposed connected/automated vehicles (CAV) deployments.
